This certification course is taught by a qualified teacher from OCR. The course focuses on the basic understanding of anatomy and physiology as it applies to Hand Reflexology and the practical methodology.

Topics Include:

- Chapter 1 - History & Theory of Reflexology
- Chapter 2 - Zones of the Body
- Chapter 3 - Hand Examination
- Chapter 4 - Reflexology Techniques
- Chapter 5 - Reflexology Health and Session Records
- Chapters 6 to 15 - Anatomy & Physiology of Body Systems
- Chapter 16 - Reflexology Hand Procedure

Successful completion of the course will earn and obtain certification from the Ontario College of Reflexology.

* Examination/Assessment fees **not included** where applicable.

** All costs shown in Cdn. funds and is subject to change without notice.

What Is Reflexology?

Reflexology is a focussed pressure technique, usually directed at the feet or hands. It is based on the premise that there are zones and reflexes on different parts of the body which correspond to and are relative to all parts, glands and organs.

Zone Theory is the foundation of Foot Reflexology and an understanding of the Zones as a system for organizing relationships between various parts, glands and organs of the body and the reflexes are essential to reflexology and its applications.

The benefits of reflexology are:

1. Relaxation with the removal of stress;
2. Enhanced circulation;
3. Assists the body to normalize metabolisms naturally;
4. Complements all other healing modalities.

Reflexologists do not:

1. Diagnose medical conditions unless qualified to do so.
2. Prescribe medications unless qualified to do so.
3. Treat for specific conditions except in emergencies.
4. Work in opposition to the medical or other fields.
5. Encourage the client to cease taking their prescribed medication.
